Rate and area assumptions

Reference note for the Medical Infrastructure Division.

01 / WHERE THIS SITS

Lyfe Place Abuja, and what it is.

Lyfe Place Abuja is a Medbury Healthcare expression under the **Medical Infrastructure Division**. A medical park, not a clinic Medbury staffs. Two businesses occupy it, one per floor, with Medbury Diagnostics and Medbury Pharmaceuticals supporting both.

Where	Who	Basis
Ground floor	Alameda / Medbury Conversion Clinic SPV	Medical tourism conversion. Blended annual licence
First floor	Rentable private clinic business	The Harley Street model and The Cloister membership. Sold by the session
Ground floor support	Medbury Diagnostics, laboratory and imaging	Serves both floors. Facility, not a tenant
Ground floor support	Medbury Pharmaceuticals	Serves both floors. Facility, not a tenant
Guest chalet	Medlyfe longevity and infusion	Conventional lease, own entrance
Boys' quarters	Back of house	Staff, records, medical waste holding, plant

> The two floors are different businesses with different economics, and that is the point. The ground floor is a single anchor licence, contracted and predictable. The first floor is a sessional business that yields several times a conventional lease on the same square metre. Diagnostics and pharmacy capture value from both, and Medbury owns them outright.

02 / AREA BASIS

Measure from let-bearing, not from gross.

Area	sqm	Note
Gross external	711	Measured from the as-built drawings
Net internal, at 87%	619	After wall thicknesses
Let-bearing	**288**	**47% of net internal. The only space that carries a rate**
Facility	331	53%. Diagnostics, pharmacy, reception, waiting, circulation, doctors' lounge, back of house

47% let-bearing is the number to carry forward. A purpose-built medical block runs at 75% to 80%. A converted residential property that also houses its own diagnostics and pharmacy runs at 45% to 50%. Any future park should be planned on the lower figure unless it is purpose-built, because it is the single biggest driver of the rate per let sqm.

Let-bearing space	sqm
Conversion Clinic SPV, exclusive demise	46
First floor: 8 consulting rooms, FUE suite, procedure room	162
Medlyfe, guest chalet	80
Total let-bearing	**288**

03 / THE RECOVERY ROUTES

One service charge per sqm does not work here.

This is the methodological point worth carrying into any future park. Annual operating cost is NGN 92M. Divided across 288 let-bearing sqm that is NGN 319,000 per sqm, which is an unlettable number. Divided across 619 net internal sqm it is NGN 149,000, which under-recovers. Neither is right, because **the three occupier types recover cost in three different ways**.

Occupier	sqm	How cost is recovered	NGN M / yr
Conversion Clinic SPV	46	Blended annual licence, rent and services in one figure	132.0
First floor sessional	162	Per block. Recovery is inside the tariff	337.1
Medlyfe, chalet	80	Conventional lease, NGN per sqm all-in	36.5
Total	**288**		**499.4**

The meaningful headline is yield per let-bearing sqm: NGN 1.73M per sqm per year. Cost is NGN 602,000 per let-bearing sqm, so margin is about NGN 1.13M per sqm. Use that ratio for planning, not a service charge per sqm, and never quote a market service charge comparable in a building with a sessional floor.

04 / RATE CARD

The assumptions, and where each comes from.

Conventional leases

Category, NGN / sqm / yr	Base rent	Service charge	All in
Premium medical suite	270,000 to 300,000	105,000 to 125,000	375,000 to 425,000
Wellness and longevity, chalet	331,000	125,000	456,000
Diagnostic provider, if ever external	300,000 to 340,000	105,000 to 125,000	405,000 to 465,000
Pharmacy, if ever external	340,000 to 375,000	105,000 to 125,000	445,000 to 500,000

Sessional tariff, first floor

Band	Block	NGN per block	Assumed fill
Weekday early, 07:00 to 09:00	2 hours	44,000	35%
Weekday daytime, non-drive days	4 hours	61,000	35%
Weekday evening, 17:00 to 21:00	4 hours	94,000	55%
Saturday	3.3 hours	83,000	45%
Procedure room	per session	248,000	n/a
Guest and ad hoc	any band	about 2x member	n/a

Conversion Clinic SPV, blended licence

Component	NGN M / yr	USD / yr
Rent, priority rooms and MDT room	38.75	25,000
Facility and services, laboratory, imaging and pharmacy included	93.25	60,000
Blended annual licence. Ask 132, floor 114	**132.00**	**85,000**

Common terms

Term	Assumption
Rent review	12% a year, minimum, with market review every 5 years
Lease term	5 years firm plus a 5 year option
Deposit	6 months' rent plus 6 months' service charge
Fit-out	Tenant funded, subject to landlord approval
Operating window	07:00 to 21:00 Monday to Saturday, all tenants
Payment	12 months in advance for the SPV licence, in USD

05 / THE SESSIONAL INSIGHT

The same metre, sold many times.

Basis	sqm	NGN M / yr	NGN M / sqm
Consulting rooms, 8 at ~14 sqm	112	263.1	2.35
Procedure and treatment rooms	50	74.0	1.48
First floor blended	**162**	**337.1**	**2.08**
A conventional lease on the same space, at 425,000 all-in	162	68.9	0.425

> **Sessional letting yields 4.9x a conventional lease on the same square metre, at about 39% fill.** A single consulting room produces roughly NGN 32.9M a year. That multiple, not the rent per sqm, is the reason a medical park works, and it is the assumption most worth stress-testing before any future site is committed. It is also validated against the Harley Street in Ikoyi model, which showed NGN 37M per room at 55% fill on Lagos rates.

06 / DIVISION PLANNING ASSUMPTIONS

Rules of thumb to reuse.

These are the numbers to carry into a business plan for any future Medbury medical park, not just Abuja. Each is derived in this note or its companions.

Assumption	Value	Basis
Gross to net internal	87%	Wall thicknesses in a converted residential property
Net internal to let-bearing	45% to 50%	Converted property with on-site diagnostics and pharmacy. Purpose-built runs 75% to 80%
Yield per let-bearing sqm	NGN 1.7M / yr	At stabilisation, with a sessional floor and an anchor licence
Cost per let-bearing sqm	NGN 600,000 / yr	Including rent and amortisation
Sessional multiple over a lease	4.9x	At about 39% fill across four daily bands
Per consulting room	NGN 33M to 37M / yr	Abuja to Lagos. Eight rooms is the first-floor ceiling with the FUE suite in place
Conventional medical suite, all in	NGN 375,000 to 460,000 / sqm / yr	
Light-touch clinical fit-out	NGN 180,000 to 250,000 / sqm	Sound building. Decoration, partitioning, cooling, ICT, fire, FF&E
Full conversion fit-out	NGN 300,000 to 350,000 / sqm	Strip out, rewire, structural and roof
Capital intensity, all in	NGN 740,000 / sqm gross	Rent prepay, fees, fit-out, power and working capital
Power	NGN 39,000 / sqm gross / yr	14 hours over 6 days, with hybrid solar carrying daytime load
Rent review	12% a year minimum	Below Nigerian inflation but defensible
Break-even test	Fixed leases cover 90% to 100% of fixed cost	Sessional and capture are margin, never the base case

The last line is the discipline. **A park should be underwritten on its anchor leases alone.** If the fixed leases do not roughly cover the fixed cost base, the site is being bought on hope about sessional fill, which is the assumption most likely to be wrong.

07 / ONE OPEN QUESTION

How much of the ground floor the SPV actually takes.

The ground floor has 201 sqm of usable space. Medbury Diagnostics needs 115 of it and Medbury Pharmaceuticals 40, which leaves 46 for the Conversion Clinic. Imaging cannot go upstairs: no lift, equipment weight, and lead shielding. So there are two readings of the SPV taking the ground floor.

Reading	What it means	View
A. Anchor, not sole occupier	SPV demise is 46 sqm exclusive, rising to about 100 during drives. Diagnostics and pharmacy sit alongside as campus support serving both floors	Recommended
B. Full floor	SPV takes all 201 sqm. Pharmacy relocates to the boys' quarters, laboratory moves upstairs, imaging stays on the ground floor inside the SPV demise	Not recommended

Option B has a structural problem. It puts Medbury Diagnostics' imaging suite, the highest-margin asset on the campus, inside a demise controlled by an entity Alameda holds 51% of. That is precisely the exposure the wholly owned PropCo structure exists to prevent. Option A gives the SPV the ground floor as its clinical home and its identity, without handing a JV partner the landlord position over Medbury's own business.

Still to verify

Input	Status
Areas	Measured from as-built PDFs. Confirm against the CAD. Every rate here re-bases if the areas differ
Sessional fill	35% to 55% by band, borrowed from the Ikoyi model. Unvalidated for Abuja and the largest single sensitivity
Session rates	Derived from the Ikoyi tariff less 10%. Should be tested against live Med Lyfe room rates before launch
Service charge inputs	Power at a blended NGN 250 per kWh. Confirm from an AEDC bill
