

The Abuja campus, on two pages

What it is, what it needs, what it returns, and the three decisions that hold the date.

What it is

A 664.3 sqm medical campus across four structures, opening in month 3 on a two month fit-out. **Downstairs is rent:** the conversion clinic is a tenant, so its clinical revenue is not ours and appears nowhere in these numbers. **Upstairs is the business**, and it is sessional: six rooms carrying our own clinics in the working day and visiting consultants in the evenings and on Saturdays. Diagnostics takes the guest chalet and the pharmacy the boys' quarters.

So the number this runs on is consultants signed, not square metres let. 45 of them against a prime time ceiling of 50, reached 18 months after opening. The pricing is not invented: it comes from the consultant survey run in August.

The money

To open and run six months	NGN 523 M	Lean fit-out 237.2, equipment 36.3, launch marketing 30.0, our fee 45.5, the four clinics 149.0, six months of running cost, less occupier contributions
Peak exposure	NGN 659 M	Month 15. The theatre capital lands while the ramp is still young
Stops burning cash	Month 10	8 months after opening
Capital returned	Month 33	31 months after opening
Return	41% IRR	NPV NGN 238 M at a 25% naira hurdle, 2.6 times cash back over five years. No terminal value anywhere

What it earns at run rate

NGN M a year		
Rent, downstairs	68	Conversion clinic 45.2 on 113.0 sqm, diagnostics, pharmacy. Contracted, no demand risk
Sessional, upstairs	370	Room fees, equipment, membership
Theatre	152	Own lists plus external surgeons
Our own clinics	1,008	Aesthetics, hair restoration, bariatric and endoscopic, longevity and infusion
Group revenue	1,598	
Group EBITDA	460	29% margin, after our management fee
Attributable to Medbury	400	After partner equity in the clinics

Year by year

NGN M	Year 1	Year 2	Year 3	Year 4	Year 5
Group revenue	422	1,462	1,596	1,598	1,598
Group EBITDA	-48	369	458	460	460
Attributable to Medbury	-60	311	398	400	400
Net cash flow	-580	267	458	453	446
Consultants signed, year end	26	45	45	45	45

The one thing to take from the whole pack. You can overrun the fit-out by a wide margin and still make money. You can only miss the consultant target by about a third. This is a demand risk wearing a construction project's clothes, and the thinnest assumption in it rests on 20 survey responses. Widening that survey costs almost nothing and is the cheapest risk reduction available.

How the campus fills

To sign 45 consultants we contact **417 named people over 18 months, about five a week**. 40 per cent give a real conversation, 45 per cent of those want what we are selling, and 60 per cent of those who try a session come back. The trial is the conversion event, not the meeting: a first session at half rate, and someone who books again within 30 days has

signed.

Prime time is the lever, not price. Demand sits in weekday evenings and Saturday mornings and there are only 168 prime hours a week across six rooms. Below about 50 consultants a guaranteed recurring slot costs nothing to give and is worth a great deal to someone with a hospital job. Past that it is the most valuable thing on the campus.

The rate card

Consulting room	NGN 35,000 an hour	A 2 hour session is NGN 70,000, which is the survey's optimal price point
Procedure room	NGN 70,000 an hour	Double the consulting room: couch, operating light, suction, monitor, sterile field
Day case theatre	NGN 150,000 an hour	Anaesthesia, HEPA, scrub, two recovery bays
Membership	350k to 1.5M a year	Four tiers taken off the survey's own distribution. It discounts the room, never the equipment

The five operating companies

Company	Ownership	Revenue	EBITDA	
Lyfe Place Abuja, the campus	Medbury 100%	590	186	Head lease, fit-out, the sessional business, the theatre
Medlyfe Aesthetics and Regenerative	Medbury 51%	285	82	Injectables and skin led, four rooms upstairs, runs in the working day
Lyfe Place Hair Restoration	Medbury 100%	220	55	FUE, 132 cases a year, one procedure room for most of three days
Bariatric, Metabolic and Endoscopic	Medbury 70%	263	66	GLP-1 and swallowable balloons from month 3, endoscopic work from month 9
Medlyfe Longevity and Infusion	Medbury 100%	240	71	Four dedicated bays, programme based, the only line that pre-sells
Group		1,598	460	Attributable to Medbury NGN 400 M

What Consult for Africa is paid

Setup programme	NGN 45.50 M	178 days across five named grades. Released against four named deliverables, not hours. Ends when the campus opens
Management fee	7.5% then 10.0%	Of campus revenue. The lower rate until your capital is home. Starts month 3, so nothing during the fit-out
Third party	At cost	Architect, mechanical and electrical, quantity surveyor. No mark up

Three decisions this week, and they are the ones that hold the month 3 opening.

One. Approve the design sprint and place the long lead orders. Cooling, medical gas and nurse call run to 12 weeks. Ordered late, nothing recovers the date.

Two. Start the FCT licence application now, alongside the design rather than at practical completion. It is the only item on the critical path that money cannot accelerate later.

Three. Settle the conversion clinic lease at NGN 45.2 M with a break at year three. Housing them costs NGN 332,214 a sqm once rent, their share of the fit-out and the services they consume are counted, so anything below that is a subsidy. The break matters because past 50 consultants that floor is worth more as bookable rooms.

Debo Odulana Consult for Africa / +234 913 813 8553 / hello@consultforafrica.com

Summary only. The full pack is the campus plan and financials, the feasibility study, the business plan and go to market, the fee schedule and the monthly model. Areas measured from the as-built CAD; the chalet and boys' quarters remain estimates. Demand evidence from the premium medipark consultant survey, n=20, 12 to 19 August 2026, against a target of 40 to 60. Fit-out is an AACE class 4 estimate before a tendered bill of quantities. Not a binding offer, and not legal or tax advice.
