

Crash-Cart Standard & Shift Checklist

Haven Paediatric Centre · Week-1 quick win

A stocked, sealed, checklist-governed paediatric crash cart with a routine that runs every shift, by habit, not reminder. Finalise contents and doses with Dr Shakirah and Dr Odedina against Haven's protocols and patient mix; this is the operating standard, not a clinical prescription.

The standard

1. **One cart, one standard layout.** Same drawer for the same thing, every time. A laminated contents map on the cart.
2. **Sealed when ready.** A numbered breakaway seal. Intact seal = complete and in date. Broken seal = restock, re-check and re-seal before it counts as ready.
3. **Checked every shift.** At the start of each shift the responsible nurse confirms the seal is intact and its number matches the log. A full contents-and-expiry check at least daily and after every use.
4. **Restocked immediately after any use.** Returned to full, in-date and re-sealed before the shift ends — never 'later'.
5. **Owned.** A named role (matron / shift lead) owns cart readiness each shift and signs the log.

Shift check log (kept on the cart)

Date	Shift	Seal intact?	Seal # matches?	Full check (daily)	Used?	Restocked & re-sealed	Checked by

Contents checklist (confirm / adjust with clinical leads)

Airway / breathing

- ☐ Paediatric & neonatal bag-valve-mask; masks (sizes)
- ☐ Oxygen source + tubing; suction + catheters (sizes)
- ☐ Oropharyngeal airways (range); ET tubes (range) + introducer; laryngoscope + blades (working, spare batteries)

Circulation / access

- ☐ IV cannulae (paediatric / neonatal range); IO access device
- ☐ Syringes, needles, giving sets; fluids (per protocol); tape, tourniquet, gloves

Emergency drugs (doses per Haven paediatric / neonatal protocol)

- ☐ Adrenaline / epinephrine
- ☐ Atropine
- ☐ Dextrose (appropriate concentration)
- ☐ Adenosine

- ☐ Amiodarone
- ☐ Naloxone
- ☐ Hydrocortisone
- ☐ Salbutamol / bronchodilator
- ☐ Anticonvulsant (per protocol)
- ☐ Sodium bicarbonate (per protocol)
- ☐ Normal saline / flushes

Monitoring / equipment

- ☐ Pulse oximeter (paediatric / neonatal probe)
- ☐ Glucometer + strips
- ☐ BP cuffs (sizes); thermometer
- ☐ Defibrillator with paediatric pads/paddles (if applicable), checked & charged

Documentation

- ☐ Paediatric resuscitation algorithm / weight-dose chart on the cart
- ☐ Broselow-style weight/dose reference (if used); incident / resuscitation record forms

This standard, plus the shift log, is the first thing we put in place. It costs almost nothing, and it is the clearest signal to the team that the way things are done is changing.
