

The Abuja campus

What it is, what it costs, what it returns, and what would have to go wrong.

Dr Itunu Akinware, Group Chief Executive, Medbury Medical Services

Itunu, this is the whole campus: six companies incorporated around a converted 664.3 sqm building across four structures, opened in month 3 and run as a sessional medical business.

The shape has changed. **Downstairs is rent.** The conversion clinic is a tenant, so its revenue is not ours. **Upstairs is the business**, and it is sessional: six rooms carrying our own clinics in the working day and visiting consultants in the evenings and on Saturdays.

So the number this runs on is not square metres let. It is **consultants signed**. At 45 it produces NGN 1,598 M of revenue and NGN 460 M of EBITDA, NGN 400 M of it attributable to you. Prime time runs out at about 50, so we are planning just under the ceiling.

Pricing comes from the consultant survey, not from us. Lean fit-out and six months of running costs is **NGN 523 M**, peaking at NGN 659 M in month 15. Capital home in month 33, 41 per cent return, NPV NGN 238 M at 25 per cent.

Section 08 is the stress test. You can overrun the building by 104 per cent and still make money; you can only miss the consultant target by 34 per cent. This is a demand risk, not a construction one.

Debo Odulana

Founding Partner, Consult for Africa

SUMMARY

The campus on one page.

		Note
Opens	Month 3	Two months on site. Month 1 design and long lead orders, months 1 and 2 build
Lean fit-out	NGN 237.2 M	Nothing clinical, statutory or structural comes out
Minimum to open and run six months	NGN 523 M	Including the four clinics and our fee
Peak funding	NGN 659 M	Month 15, then it climbs out
Consultants signed at run rate	45	Against a prime time ceiling of 50. This is the number the business runs on
Group revenue	NGN 1,598 M	Rent 68, sessional 370, theatre 152, own clinics 1,008
Group EBITDA	NGN 460 M	29% margin, after our management fee
Attributable to Medbury	NGN 400 M	After partner equity in the clinics
Stops burning cash	Month 10	8 months after opening
Capital returned	Month 33	31 months after opening
Return	41% IRR	NPV NGN 238 M at 25%, 2.6 times cash back over five years

01 / THE BUILDING

What is there, and what limits it.

	sqm	What is in it
Ground floor	282.2	Reception and shared services 105.2, theatre 64.0, conversion clinic 113.0
First floor	284.1	3 consulting and 3 procedure rooms, a 4 bay infusion suite, relaxation and connect
Guest chalet	61.0	Diagnostics: laboratory and imaging
Boys' quarters	37.0	Pharmacy: dispensary, retail and cold chain
Net internal	664.3	Measured from the as-built CAD, not the brief

The constraint is prime time, not floor area. Consultants want weekday evenings and Saturday mornings, which the survey shows plainly. That is 28 hours a week per room and 168 across the six bookable rooms. At 1.65 sessions a week each, prime runs out at about **50 consultants**. Our own clinics need about 3,693 room hours a year and run in the working day, so the two uses do not collide until prime is full. Above 50 you would need the ground floor back, which is an argument for a break clause in the conversion clinic's lease rather than a longer building.

02 / HOW IT EARNS

Four lines, and only one of them is rent.

	NGN M	Share	What it is
Rent, downstairs	68.3	4%	The conversion clinic on 113.0 sqm, diagnostics in the chalet, pharmacy in the boys' quarters. Contracted, no demand risk
Sessional, upstairs	369.5	23%	Room fees, equipment and membership from 45 consultants
Theatre	151.8	10%	Our own lists plus external surgeons. 30% of surveyed consultants need one
Our own clinics	1,008.0	63%	Aesthetics, hair restoration, bariatric medicine, longevity and infusion
Group revenue	1,597.7	100%	

The rate card, and where it comes from

		Note
Consulting room, per hour	NGN 35,000	A 2 hour session is NGN 70,000, which is the survey's optimal price point
Procedure room, per hour	NGN 70,000	Procedure couch, operating light, suction, monitor, sterile field
Day case theatre, per hour	NGN 150,000	Anaesthesia, HEPA, scrub, two recovery bays
Equipment, added per hour	18,000 to 55,000	Ultrasound, sterile set, laser or IPL. Never discounted to members
Membership	350k to 1.5M a year	Four tiers taken straight off the survey's own distribution. It discounts the room, not the equipment, which is the only version where the fee pays for itself

03 / THE OPERATING COMPANIES

Who exists, and what each one produces.

Company	Ownership	Revenue	EBITDA	What it is
Lyfe Place Abuja Ltd	Medbury 100%	589.7	185.7	The campus. Holds the head lease and the fit-out, lets downstairs, runs the sessional business and the theatre
Medlyfe Aesthetics and Regenerative	Medbury 51%	285.0	82.0	About 1,580 treatments at 45 minutes. Runs in the working day
Lyfe Place Hair Restoration	Medbury 100%	220.0	55.0	132 FUE cases at 8 hours. Occupies one procedure room for most of three days
Bariatric, Metabolic and Endoscopic	Medbury 70%	263.0	66.0	GLP-1 and dietetics, swallowable balloons from month 3, endoscopic balloon, sleeve gastropasty and gastric botox from month 9. Surgery only if the theatre is built

Company	Ownership	Revenue	EBITDA	What it is
Medlyfe Longevity and Infusion	Medbury 100%	240.0	71.0	Four dedicated bays, so it does not compete for the bookable rooms
Alameda Conversion Clinic	Tenant	rent 45.2	n/a	The whole ground floor bar reception and the theatre. A tenant, so its clinical revenue is not ours. Rent, fit-out recovery and service charge, quoted as three lines rather than one number
Medbury Diagnostics	Tenant	rent 15.7	n/a	Laboratory and imaging in the guest chalet, plus a draw point upstairs
Medbury Pharmaceuticals	Tenant	rent 7.4	n/a	Dispensary, retail and cold chain in the boys' quarters
Group		1,597.7	459.7	Attributable to Medbury NGN 399.7 M

04 / THE FINANCIALS

Every line, by year, then month by month.

Revenue, every line

NGN M	Year 1	Year 2	Year 3	Year 4	Year 5
Rent: Alameda Conversion Clinic	22.6	45.2	45.2	45.2	45.2

Opening is month 3. The trough is month 15 at NGN 659 M, driven by the theatre capital landing in months 11 to 13 while the consultant ramp is still young. Group EBITDA turns positive in month 10.

Each operating company at run rate

Company	Ownership	Revenue	EBITDA	Margin	To Medbury
Lyfe Place Abuja Ltd, the campus	Medbury 100%	589.7	185.7	31%	185.7
Medlyfe Aesthetics and Regenerative	Medbury 51%	285.0	82.0	29%	41.8

Group		1,597.7	459.7	29%	399.7

05 / THE MONEY

What has to be available, and when it comes back.

	NGN M	Note
Category A fit-out, after the line by line review	237.2	Two months on site
Clinical and basic equipment for the six let rooms	36.3	Couches, procedure lights, monitors, autoclave, resus trolley, front office
Launch marketing	30.0	Brand and identity, website and booking front end, photography, launch and consultant open evenings. Drawn across the three months to opening
Setup programme fee	45.5	NGN 25 M of it on mobilisation
Pre-opening operating cost	15.7	Months 1 to 2
Operating cost, first six trading months	108.3	Management fee included
Capital for the four clinics	149.0	Equipment, opening stock, working capital
Less revenue, first six trading months	-38.5	
Less contributions on grant	-61.1	Occupier cash on grant of each sub lease
Minimum to open and run six months	522.5	Building only, without the four clinics: NGN 373.5 M

When it funds itself		Note
Campus revenue covers campus opex	Month 14	12 months after opening
Group EBITDA turns positive	Month 10	8 months after opening
Trough of the bank balance	Month 15	NGN 659 M under water
Capital returned in full	Month 33	31 months after opening

06 / ASSUMPTIONS

Where each number comes from, and which ones to argue with.

Assumption	Value	Basis	What it rests on
Net internal area	664.3 sqm	MEASURED	As-built CAD to about 10 mm. Both floors return 70% efficiency
Lettable ground floor	177.0 sqm	MEASURED	282.2 less shared services. Everything else lets to the clinic
Bookable rooms upstairs	6	MEASURED	3 consulting and 3 procedure. The infusion suite is dedicated
Session price	NGN 70,000	SURVEY	Optimal price point 65,000, indifference 85,000, on a 2 hour unit
Sessions per consultant	1.65 a week	SURVEY	Q5. Half of them want two or more
Membership tiers	350k to 1.5M	SURVEY	Q13. The old 1.2M to 4.2M tiers do not survive this sample
Theatre demand	30%	SURVEY	Q15. 30% need a full theatre, 24% need sedation
Consultants signed	45 in 18 months	JUDGEMENT	Assumes the business development officer is in post from month 2 and the recruitment line is spent
Equipment attach rate	35%	JUDGEMENT	Not asked in the survey

Assumption	Value	Basis	What it rests on
Own clinic revenue	NGN 1,008 M	JUDGEMENT	Built from room hours and price lists, not comparable audited accounts
Category A fit-out	NGN 237.2 M	SCHEDULED	74 measured lines, AACE class 4, minus 15 to plus 30 per cent
Head rent	NGN 55.0 M	CONTRACTED	Two years already paid inside the NGN 115 M committed
Discount rate	25%	JUDGEMENT	Naira nominal, five years, no terminal value

MEASURED comes from the as-built drawings. SURVEY comes from the consultant survey, n=20, run 12 to 19 August 2026, against a target of 40 to 60, so read it with care. SCHEDULED comes from the 74 line fit-out estimate. JUDGEMENT is ours and is where you should push.

07 / RETURNS

With no terminal value anywhere, so these are floors.

Note		
Internal rate of return, five years	41%	Nominal naira
Net present value at 25%	NGN 238 M	Five years only, nothing beyond
Cash returned per naira in	2.6 times	Over the peak ever invested
Payback from opening	31 months	Month 33 on the programme clock
Peak funding	NGN 659 M	Month 15

08 / THE STRESS TEST

What would have to go wrong, and how wrong.

Case	Peak	IRR	NPV	Payback
Base case	659	41%	238	31
Only 30 consultants, and 30 months to get them	737	21%	-60	40
The survey was optimistic: 1.2 sessions a week, 28k an hour	703	25%	6	37
No theatre, ever	647	36%	129	30
Alameda walks away, no ground floor tenant	691	34%	137	33
Our own clinics land 30 per cent below plan	695	29%	52	36
Fit-out 25 per cent over and opening three months late	770	33%	129	34
Two demand failures together	750	11%	-189	47
Three together, with no theatre	656	1%	-263	56

How far each number can fall before the NPV goes negative

Driver	Base	Breaks at	Room to move
Consultants signed	45	30	34% below plan
Rack rate an hour	35,000	21,138	40% below plan
Sessions per consultant a week	1.65	0.91	45% below plan
Months to reach the target	18	47	29 months of slack
Category A fit-out	237.2	483.4	104% over budget

No single failure kills this, and two demand failures together do. Losing Alameda entirely still returns 34 per cent, because the ground floor rent is a small part of a NGN 1,598 M business. Losing the theatre is survivable too. But 30 consultants arriving slowly, combined with the survey being optimistic on price and frequency, takes the return to single figures.

The asymmetry is the point. You can overrun the fit-out by 104 per cent and still make money. You can only miss the consultant target by 34 per cent. **This is a demand risk wearing a construction project's clothes**, and the thinnest margin in it rests on 20 survey responses. Widening that survey before you commit the fit-out is the cheapest risk reduction available.

09 / DECISIONS

What is needed now, and what can wait.

	Decision	By	Why now
1	Accept the measured areas and the lean fit-out	This week	NGN 237.2 M against a scheduled NGN 323.0 M, same opening date
2	Approve the design sprint and place the long lead orders	Week 1	Cooling, medical gas and nurse call have 6 to 12 week lead times. Ordered late, no amount of labour recovers month 3
3	Start the FCT licence application in week one	Week 1	The facility licence, fire certificate and waste permit are the real gate on opening. They are not in our gift or the contractor's
4	Settle the conversion clinic lease, with a break at year three	This month	NGN 45.2 M a year on 113.0 sqm, quoted as three lines: rent 111,771, fit-out recovery 71,413, service charge 149,029. Housing them costs 332,214 a sqm, so anything below that is a subsidy. The break matters because if consultants sign faster than 50, that floor is worth more as bookable rooms
5	Fund NGN 523 M to open and run six months	This month	Peak exposure is NGN 659 M in month 15
6	Widen the consultant survey past 20 responses	Next 6 weeks	It is the thinnest assumption in the pack and the cheapest one to firm up
7	Open the surgical anchor conversation	This month	The theatre is worth NGN 152 M of EBITDA and it needs a surgeon with his own list

The single sentence version. Two months to fit out and open in month 3; NGN 523 M to open and run six months, peaking at NGN 659 M; 45 consultants signed makes it a NGN 1,598 M business producing NGN 400 M attributable to Medbury; the money is home in month 33 and returns 41 per cent. The building is not the risk. Signing the consultants is.

Debo Odulana Consult for Africa / +234 913 813 8553 / hello@consultforafrica.com

Areas measured from the as-built CAD to about 10 mm; the chalet and boys' quarters have no as-built drawing and remain estimates. Pricing from the premium medipark consultant survey, n=20, 12 to 19 August 2026. The fit-out is an AACE class 4 estimate, minus 15 to plus 30 per cent, before a tendered bill of quantities. Revenue and EBITDA for the clinics carry the assumptions in section 06, of which aesthetics volume, membership uptake and the bariatric case rate are the least evidenced. Related party charges are subject to a transfer pricing opinion. Not a binding offer, and not legal or tax advice. FX reference USD/NGN 1,550.
